                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        submitted (21-00T-loga) whitehead Institute/MII Center for Genome Research, 320 Charles Street, Cambridge, MA 92141, 958 on Jul 13, 2000 this sequence version replaced gi:6533285. All repeats were identified using RepeatMasKer: Smit, A.F.A. & Green, F. (1995-1907) http://ftp.genome.washington.edu/RM/RepeatMasker.html
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                NOTE: This record contains 323 individual sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads routies. Runs of N are used to separate the reads and the order in which they appear is completely and the order in which they appear is completely abstrary Low-pass sequence sampling is useful for arbitrary Low-pass sequence sampling is useful of a sequence that may be gene-rich and allows overlap relationships among clones to be deduced. Will be sequenced to completion. In the event that this sequenced to completion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              be preserved
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Contact: sequence_submissions@genome.wi.mit.edu

pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                  823.6

The queue has been cloned by polymerase chain reaction amplification of human genomic DNA, using primers derived from the Xenopus laevis melatonin receptor sequence (709947), and use of the product as a 20 probe on a human genome library in phage EMBL-3 under high stringency. The 5'-portion of the yene has been obtained by reprobing the DNA library at low stringency and the complete sequence is given in 70950. Receptor fragments which interact with melatonin, or specific antibodies, may be used as receptor agonists or receptor antagenists. Agonists may be used in therapy of circulation for specific actions the such as jet-lag or day night cycle disorders, to control ovulation, or in alteration of reproductive cycles in seasonally breeding animals. Antagonists may be used to receptor dene may also be expressed in a transgenic animal for use one a model system to screen agonists and antagonists.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match
